DETAILED ACTION

This office action is responsive to the filing of the Continuation on 3/12/04 and the filing of a Supplementary Amendment on 6/25/04.

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species 1, wherein the second electrode is connected through the nonlinear element to one of the two semiconductor regions short-circuited by said second electrode; and

Species 2, wherein said second electrode is, instead, through said nonlinear element, connected to a region different from both semiconductor regions short-circuited by said second electrode.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. The claims are deemed to correspond to the species listed above in the following manner:

Species 1: claims 19-24; Species 2: claims 1-18 and 25-34.

The following claim(s) are generic: none.

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: through the claimed nonlinear element an electrode that short-circuits two necessarily abutting semiconductor regions of opposite conductivity types is connected to a portion of the semiconductor body; however, a significant difference exists between Species 1 and Species 2 because in Species 1 said portion is within one of the short-circuited semiconductor regions while in Species 2 it is not. Said Species are mutually exclusive because said semiconductor region connected on the other end of said Nonlinear Element is either one of the short-circuited semiconductor regions or it is not. The technical features of Species 1 and 2 are not obvious over each other.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 2826

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
